

Care & Use Guide

Thank you for choosing from our handcrafted glass range. These pieces are designed specifically for internal stimulation, offering a smooth, luxurious way to explore gentle pressure, temperature play, and the naturally refined glide that only high-quality borosilicate glass can provide. Each item is crafted to feel beautifully balanced, safe, and effortlessly comfortable to use.

Here's how to get the very best from your new favourite accessory.

Getting Started

Take a moment to familiarise yourself with the shape and weight of your piece. Glass has a unique balance and glide, so a gentle approach is all you need to enjoy its naturally silky feel.

Temperature Play

One of the special qualities of glass is its ability to hold temperature.

For a warming touch: run your piece under comfortably warm water.

For a cooling sensation: let it rest in cool water for a few moments.

NB. Always test the temperature on the inside of your wrist before use to ensure it feels just right.

Comfort & Enjoyment

A small amount of your preferred lubricant will enhance the smooth surface and make everything feel effortless. Take your time, listen to your body, and allow the product's weight and elegant contours to guide you.

Cleaning & Care

Your piece is non-porous and easy to care for.

Wash before and after use with warm water and mild soap, or a toy-safe cleanser. Dry thoroughly and store in its pouch, or use a soft cloth to protect the glass and keep it looking pristine.

Safety Notes

Our glass products are designed to be strong and long-lasting. However, always check for chips or cracks before use. If you notice any damage, discontinue use and replace the item.
